# RITE & Corda miniFit Earmold Reference Guide

**A successful RITE fitting requires the appropriate mold. Oticon's RITE Earmold solutions accommodate the most difficult ears.** You select the speaker type depending upon the hearing device, and the proper size mold will be made for your patient.

## Speaker Type

## \*VarioTherm® Material

VarioTherm is a body temperature-reactive plastic for soft flexible earmolds. The unique properties of this material allow the mold to remain hard at room temperature for ease of insertion and then soften (become more flexible) at body temperature for increased comfort and optimum sealing.

Available in two shore hardnesses: VarioTherm 50 Shore and VarioTherm 70 Shore. With the hollow design of the LiteTip VT, 70 Shore is recommended and will be standard. For MicroMold VT, a 70 Shore or 50 Shore can be used. Both offer optimum sealing, however if feedback issues arise, the softer version VarioTherm 50 Shore is recommended.

**Please note: This material requires gentle warming/softening of the mold with a hair dryer before insertion or removal of the receiver.**

## Wax Protection System

Custom molds (except LiteTips) use the ProWax system. All miniFit receivers use the ProWax miniFit wax system.

### General notes for vent sizes

- Power Molds default to 1.4mm vents unless otherwise requested.
- LiteTip, MicroMolds and RITE earmolds have short vent lengths. The vent effect is the same as standard vents with larger diameters.
- Max vent is the largest vent possible and is not associated with a certain size or style.

### <sup>†</sup>Existing Instrument

If existing instrument information is unspecified, mold will be made so it can fit both miniRITE 60 or 85 speakers, space permitting. designRITE speaker must be indicated. Material is clear acrylic unless soft option is indicated.
